Nested Loops

Terms and condition of use are on the last slide

Prior Knowledge

Sequence

A **simple sequence** is one instructions following another

An **input** is how we put information into a program (keyboard, mouse, trackpad inputs) or digital device

digital devices run programs (oven, kettle, fridge, computer etc)

Repetition

A loop is a set of instructions that are repeated

A count-controlled-loop

- Is controlled by the number
- Ends after the number of repeats are complete

An indefinite loop

- we do not know how many times it will repeat or when it will end

Selection

A condition is a state we can check to see if it is true or false

Conditions

- Only checked once unless they are in a loop
- Two possible pathways

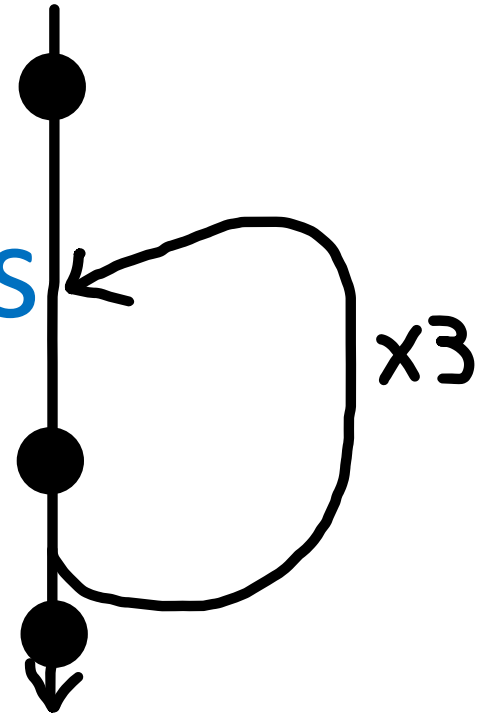

True and False

- Are only checked when reached in flow of control
- Can be used to stop a loop

Nested Loop in code

Nested loop knowledge

A nested loop is

One loop inside another loop

Nested loops

- Actions can be inside multiple loops
- Number of actions = loop A count x loop B count
